TENTH OF MILE

# BROOKS POND

Corinna Twp., Penobscot County  
U.S.G.S. Stetson, Maine

## Fishes

Largemouth bass  
Chain pickerel  
White sucker

Hornpout (bullhead)  
Pumpkinseed sunfish

## Physical Characteristics

Area - 31 acres

Maximum depth - 11 feet

Temperatures:  
Surface - 76<sup>0</sup>F  
10 feet - 70<sup>0</sup>F

Principal fisheries: Largemouth bass, chain pickerel, brown bullhead

Brooks Pond is a very shallow, weedy pond well-suited for existing warmwater fishes. The pond contains a very healthy population of hornpout with many large fish netted during the survey.

The DIF&W stocked 60 largemouth bass in 1977. These fish were obtained from Johnson Pond, on the campus of Colby College, a source which was free of the bass tapeworm parasite. Unfortunately, the resulting bass fishery has not been adequately evaluated.

The warm water temperatures of summer and the large number of competing fish species are the major limiting factor for cold water sport fish management.

A trailerable boat access site is located on the north shore of Brooks Pond along the Ireland road.

Surveyed - July, 1969

Revised - 2000
